

---

If you're a college or high school student, chemistry can be one of the most difficult courses you'll ever take. It seems like every other week, your teacher is boasting about introducing a new subject or equation. You may already be feeling overwhelmed before you start your first day of class! Don't worry — we have the perfect solution for you. We have compiled a comprehensive list of free online tutoring websites and apps that will help take chemistry from overwhelming to understandable in no time, so grab your school laptop and get ready to learn! One of the most popular tools out there is Chemistry Help . This site has interactive practice quizzes to help teach different concepts within chemistry while at home. The quizzes are broken down into different concepts like Organic Chemistry, Biochemistry, Physical Chemistry, etc. Each quiz has 10 questions that span between easy and hard difficulty levels. You select the difficulty level at the start of each quiz so you can challenge yourself as much as you'd like. You can also choose to take a timed quiz where you have to answer all 10 questions within a specified time period or an un-timed quiz that only gives you 3 lives for incorrect answers. All of the quizzes are graded after completion so if you need to retake it again, you know exactly what topics to review first. You can also check your progress as you go through quizzes to see which topics you're having trouble with. In addition to Chemistry Help , you can utilize technology from Kahn Academy . This site features free online practice sessions for chemistry, which are extremely useful for students of all levels. The videos are usually less than 10 minutes long and cover different topics like kinetics, stoichiometry, thermochemistry, etc. The website has an advanced search option where you can select the difficulty level you want or search for specific topics if you already know what you need help with. For those of you who like to learn through podcasts, we have another recommendation for you: Physics Forums . This site has a collection of podcasts that take chemistry and break it down into easy-to-understand language for students. The podcasts cover essential topics like: acids and bases, intermolecular forces, and chemical equilibrium. It's important to note that the explanations and examples used in these podcasts are geared towards adults with a background in STEM fields (ie – chemistry or physics). They don't go into as much detail as other websites on this list but they serve as a good refresher for those who know the basics already. There are also few supplements available for students. One of our favorites is Queming Gems , where students get access to videos/interactive practice quizzes of topics taught in basic chemistry or organic chemistry. Queming Gems also has a mobile app that you can download on your iPhone or iPad, making it easier for you to access the content on the go. Another awesome website that will help you learn chemistry even faster is Chemistry Lab . This tool features downloadable PDFs of the most common textbooks in chemistry.
